### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### DETAILED ACTION

1. The following Office Action is based on the amendment filed on September 28, 2007, having claims 1-4 and figure 1.

#### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Franklin (US 4,677,616)

For claim 1, Franklin discloses at least one control station (see packet switch control, element 130 in Fig 1);

At least one reception station (see station 111 in Figure 1);

A data bus operated in a multiplex mode and connected to the control station and to the reception station (see connections between data bus 140 and elements 111 and 130 in Figure 1); and

A control bus (control bus 141 in Figure 1) connected to the control station and to the reception station, and through the control bus, the control station allocating a logical channel to the reception station (column 4, lines 33-45)

For claim 2, Franklin discloses operating a data bus configuration having at least one control station (element 130 in Fig 1), at least one reception station (element 111 in

Art Unit: 2616

Fig 1), a data bus operated in a multiplex mode and connected to the control station and to the reception station (column 3, lines 25-37), and a control bus connected to the control station and to the reception station (column 3, lines 38-43)

Transfer an address onto the data bus for soliciting the reception station, using the control station and allocating a logical channel to the reception station through the control bus (column 4, lines 33-45); and

Interchanging data between the control station and the reception station for as long as the channel remains allocated to the reception station and is called (column 8, lines 19-45)

For claims 3 and 4, Franklin discloses soliciting the reception station through the control bus by calling the logical channel at a same time or before the transfer of the data (column 4, lines 50-67).

### ***Response to Arguments***

3. Applicant's arguments with respect to claims 1-4 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Vasa (US 6,442,168 B1) is cited to show a system pertinent to applicant's invention.
